

UP TO 40% FINISHED PRODUCT
IN JUST ONE PASS

STEDMAN

Mega-Slam™ Primary Impactor

for the Brick & Clay Industry

The Mega-Slam™ crusher features a solid rotor and large intake opening that will allow up to 40" feed size. No problems with an occasional rock that somehow gets into the raw feed causing lock-up or shearing of pins in a roll crusher. Unlike a jaw crusher, the Mega-Slam will typically produce 30 to 40% finished product (8m to 14m) in one pass. Just think of how this will help relieve the grinder and fulfill your plant requirement of finished product. Using a Mega-Slam can allow new plants to downsize their grinder requirements which means less initial investment and lower operating costs. Apron heaters and an air cannon are available for high moisture. Eliminate downtime from plugging and build-up. See the back side for features and benefits.

*Less initial investment
and lower operating cost!*

Stedman Mega-Slam™ Primary Impactor

Design Features & Benefits

▶ **Air Cannons** & manifold prevent build-up between the aprons wet/damp material. Timer is included.

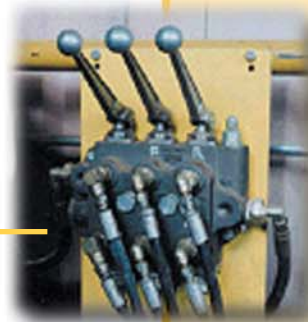

◀ **Heaters** on the feed chute, primary & secondary aprons for minimizing build-up in wet and sticky applications. Controller is included.

NEW

▶ **Hydraulic Shim Kit** helps maintain the desired gap settings. Costly downtime, maintenance and wrench turning to raise or lower the apron assemblies are eliminated.

◀ **Rear apron** with spring bridge shown.

▶ **A 3-spool control valve** with counterbalance to be used with supplied pump.

Test before you buy:

Complete full-size Test Plant for particle size reduction, processing and material handling system analysis. After testing you will receive a confidential, written technical report detailing: Moisture content, raw feed size distribution, product gradation analysis, Abrasion test result, horsepower consumption and estimated metal replacement costs. Call for further details.
